

# DECO COLUMN ANCHORS

A strong, reliable anchor for use in general construction, Deco Column Anchors are designed to be installed flush with the foundation.

**T**HIS ELIMINATES ALL THE problems associated with the typical hook bolt installation. Deco Column Anchors eliminate safety issues because there is no steel protruding above the finished surface after the concrete has been poured and prior to finished construction. They also eliminate the possibility of damage to the threaded bolt prior to use.

Deco Column Anchor studs are machined from ASTM A36 hot-rolled steel, yielding a minimum tensile strength of 55,000 lbs. psi. Couplings are mill-tested, C1144, cold-rolled steel and deliver a minimum yield strength of 90,000 lbs. psi. Couplings are capped with a protective seal as a precaution against interim damage. These features are vital when considering pre-planned expansion, bridges, and general construction.

Deco Column Anchors can be fabricated to any length and diameter you specify and are available in stainless, galvanized, or a variety of other materials.

## DECO: THE INDUSTRY STANDARD

For more than 50 years, Deco Manufacturing has delivered industrial products that stand the test of time. Our work is rock solid — and so is our reputation. When it comes to your manufacturing needs, trust Deco Manufacturing to get the job done.
